

It's what we can do, at this moment now. Vol.4

Do you know about the differences between antibacterial, bacteriostatic, and antiviral?

Antibacterial processing Bacteriostatic processing Antivirus processing

Antibacterial processing

Antibacterial agent inhibits the number of bacteria which can be a cause of an offensive odor.

Bacteriostatic processing

Bacteriostatic method helps to reduce the number of bacteria.

Antivirus processing

Antivirus agent aimed at drastically reducing the number of virus. Although its effect on COVID-19 is uncertain, FLUTECT processing is effective for an enveloped virus such as HCoV and influenza virus.

Caution: Antivirus agent does not aimed at prevention/treatment of disease and inhibiting virus.

Antibacterial deodorant and antiviral product
